List of Targets <small> <medium> <full>

1

Database (at ~2 years):

of experiments: ~300
 # of images : ~235,000
 # of records: ~45,000,000
 Online data: ~1 Terabyte
 Archived data: ~360 Gbytes
 Size of database: ~270 Mbytes

“Typical experiment”

5000 images collected
 20 Gbyte data

- Provides a means of systematically assessing the quality of the data.
- Provides a system for delivering “standard” datasets to other interested communities.

<http://nramm.scripps.edu/>

Assessing the images: TMV

Exposure 1

dose $\sim 12e^-/\text{\AA}^2$

$\Delta f = -30\text{nm}$

Exposure 2

dose $\sim 24e^-/\text{\AA}^2$

$\Delta f = -200\text{nm}$

Focus image

$\Delta f = -200\text{nm}$

Assessing the images: GroEL

Exposure 1

$\Delta f = -60\text{nm}$

Exposure 2

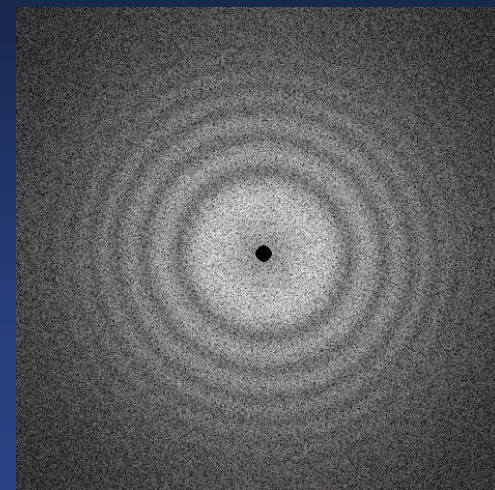

$\Delta f = -200\text{nm}$

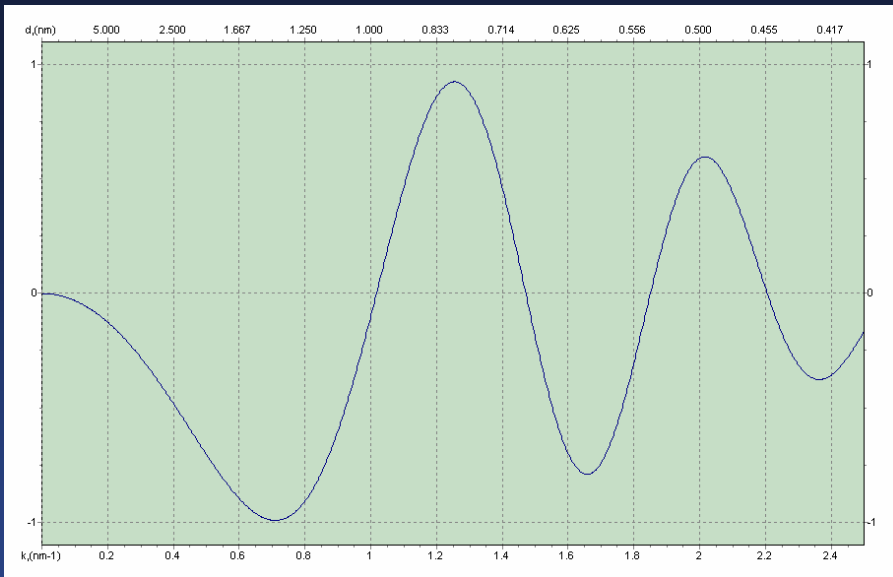

Focus image

$\Delta f = -60\text{nm}$

Defocus determination

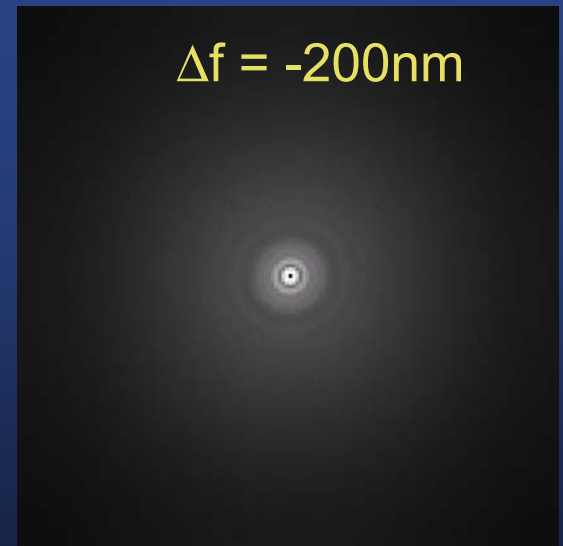

Defocus -300nm

Defocus -2000 nm

1 image : 17 particles

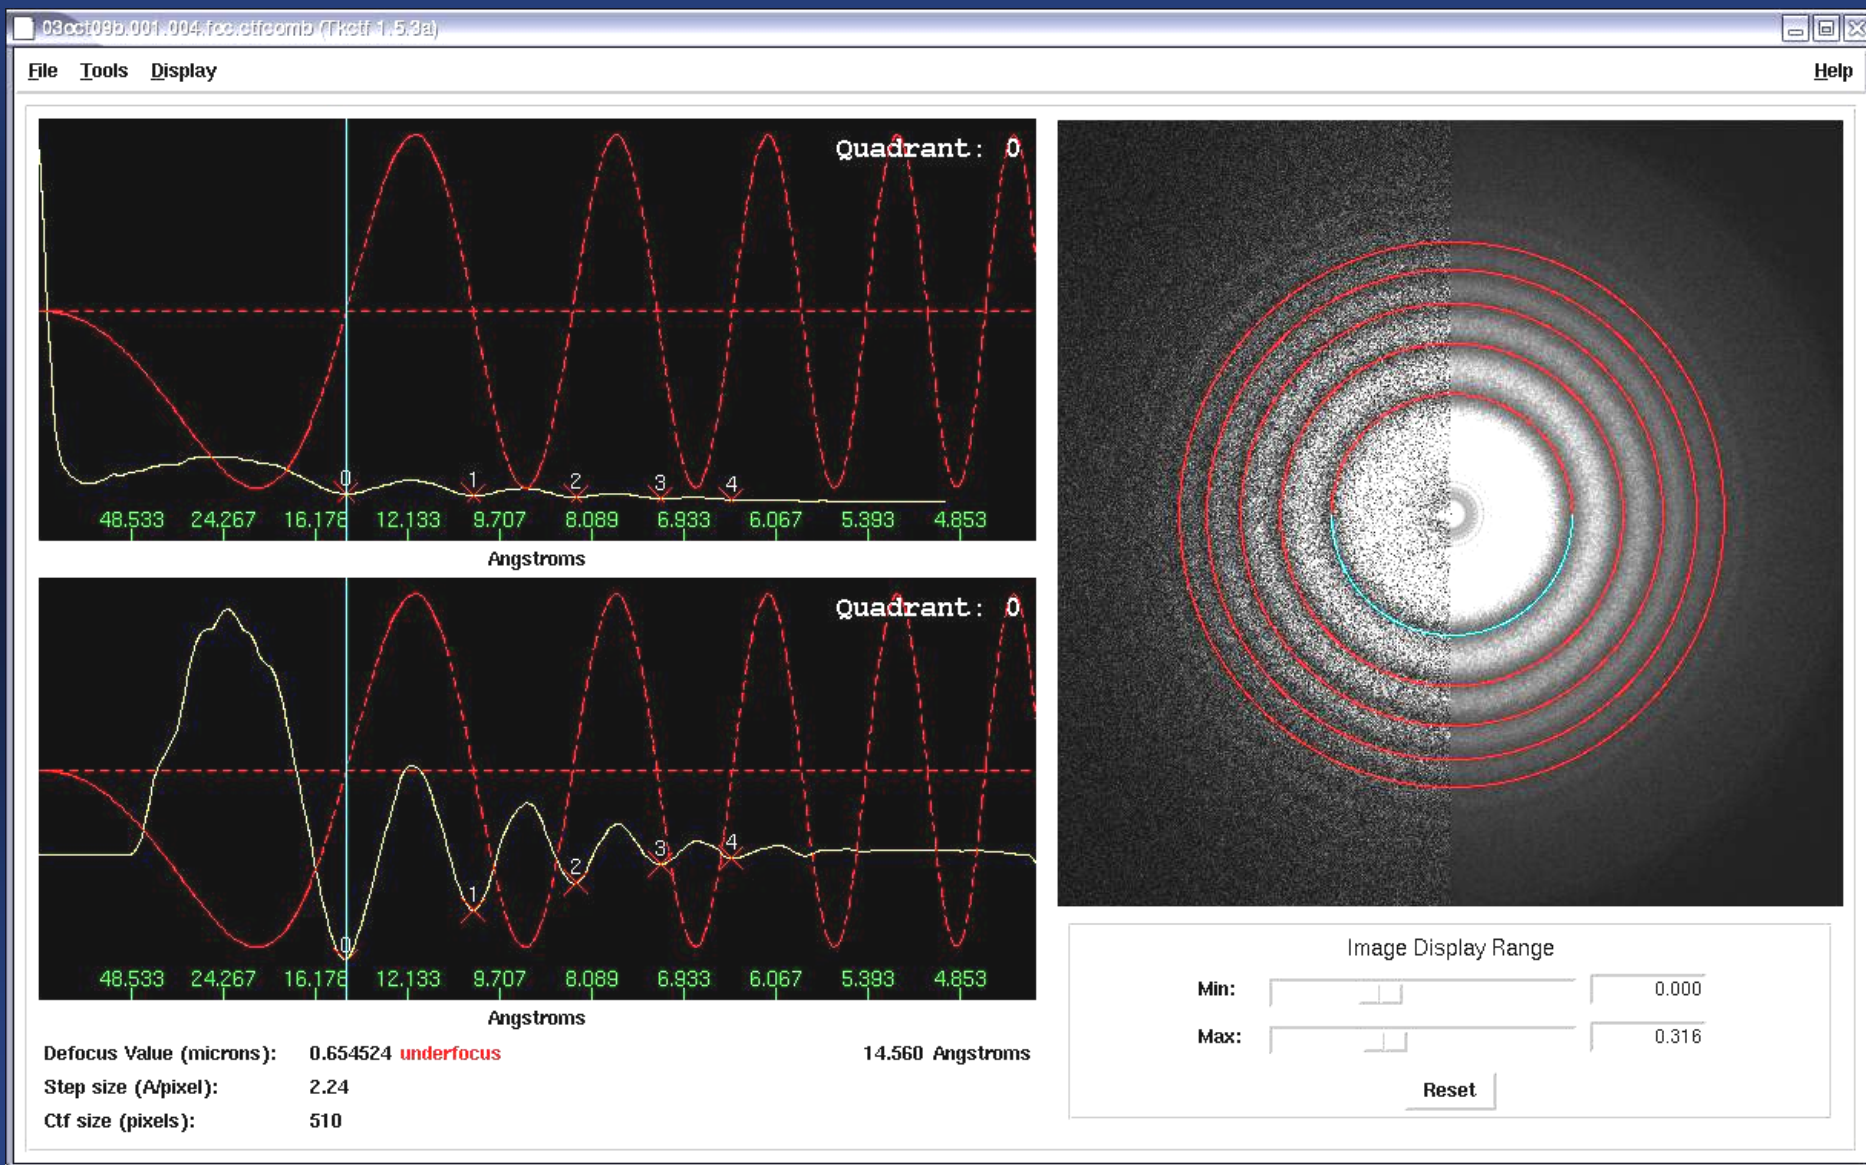

Set of images : ~ 2000 particles

focus power spectrum

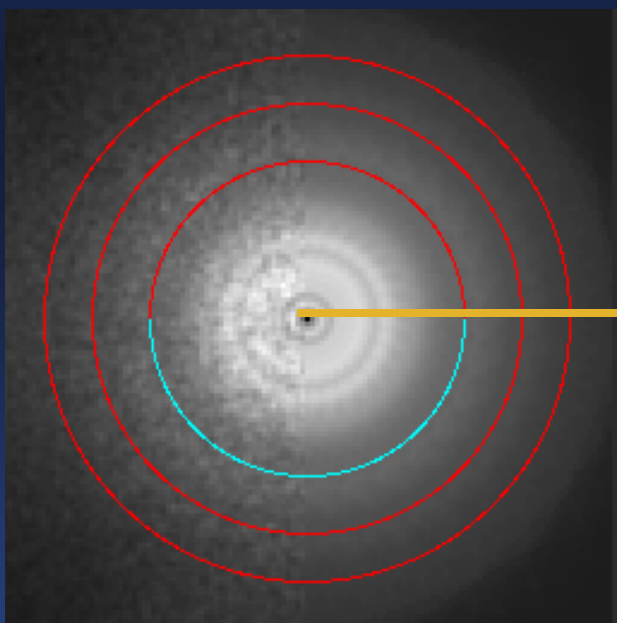

“Automated” defocus determination

Defocus determination using incoherent sum of structure

FT(incoherent sum)

Some examples using the “Roseman” algorithm (+)

GroEL
images: 364
particles: 23,000
Time: 20 hours

Ribosomes
images: 551
particles: 26,000
Time: 36 hours

CPMV
images: 300
particles: 14,000
Time: 6 hours

Reconstruction:

helices

single particles

viruses

2D crystals

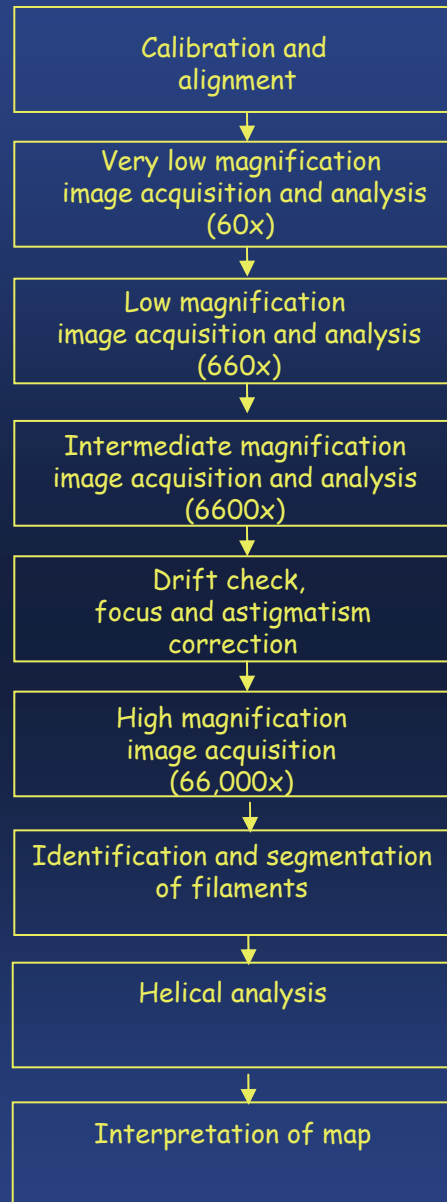

Reconstruction of TMV
Grid to map: 10Å within 24 hours.

TMV

Leginon for TMV

- Survey grid
- Identify potential grid squares
- Dose = 0

- Identify location of holes
- Estimate ice thickness
- Dose = 0.001 e/A²

- Estimate probability of specimen
- Identify location of best specimen
- Dose = 0.1 e/A²

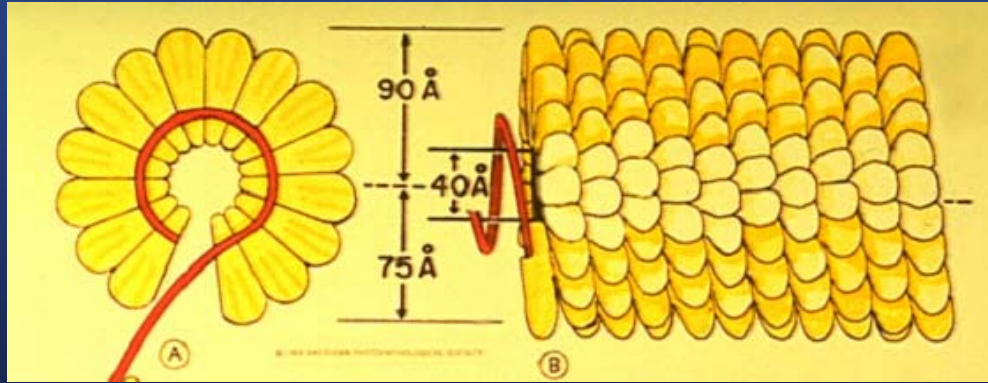

- Identify and segment filaments
- Dose = 10 e/A²

- Find layer lines
- CTF correction
- Tilt and shift correction
- Fitting and averaging

Why TMV?

- 1: 69 Å
- 2: 34.5 Å
- 3: 23 Å
- 4: 17.2 Å
- 5: 13.8 Å
- 6: 11.5 Å
- 9: 7.6 Å
- 12: 5.8 Å

Layer Line Numbers: 1 2 3 6 9 12

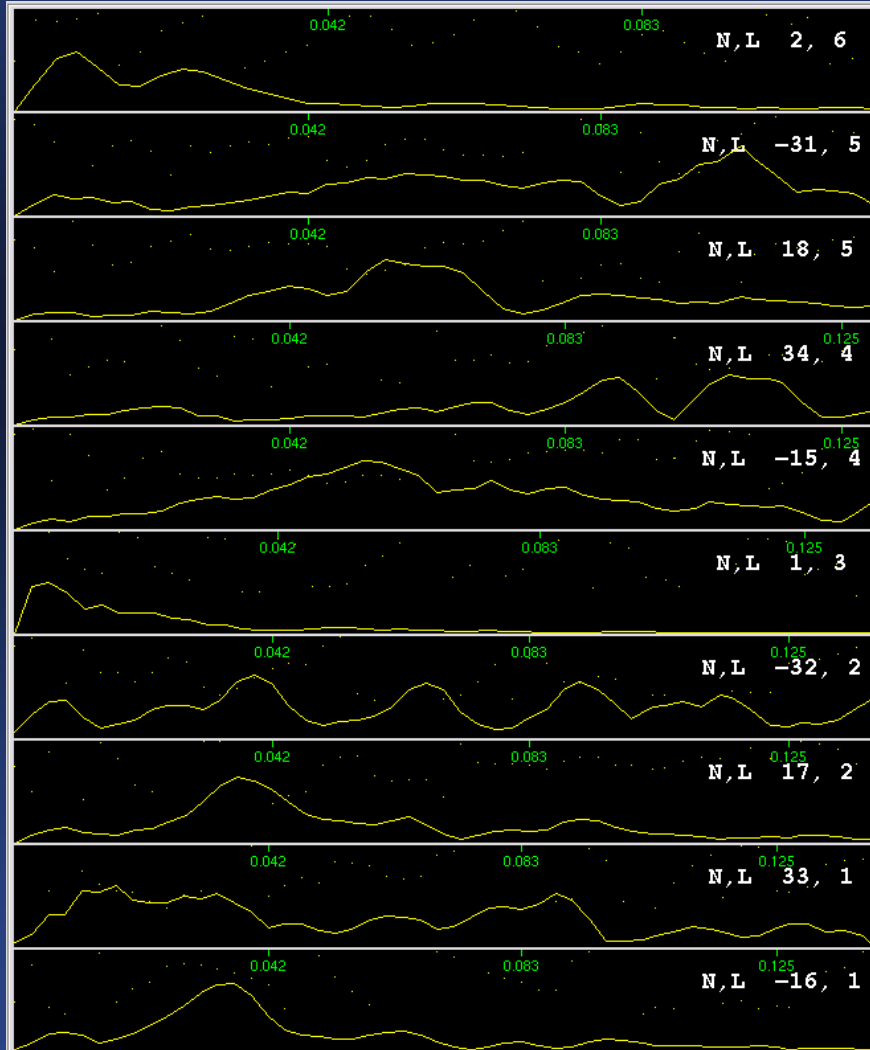

Helical analysis using Phoeelix

LL	0	1	2	3	4	5	6	7
		69A	34.5A	23A	17.3A	13.8A	11.5A	9.86A

69 Å

7.6 Å

11.5 Å

Fourier Shell Coefficient (FSC) for this experiment: 5.8Å

Interpretation of the map

Cylindrical section at radius 66Å

What is the throughput?

# grids:	1
# squares:	19
# holes:	91
# defocus pairs:	131
# filaments found:	243
Duration:	12 hrs
Phoelix reconstruction	
# filaments used in map:	45
# molecules in map:	~70,000
Resolution of map:	~7.6Å
Yield:	~20%

Single particle example: 3D reconstruction of Hemocyanin

# grids:	1
# squares:	10
# holes:	209
# defocus pairs:	816
# particles found:	21,000
Duration:	28 hrs
Spider reconstruction	
# particles used in map:	~11,000
# molecules in map:	~110,000
Resolution of map:	~12 Å (FSC 3 σ), ~15 Å (FSC 0.5)

3D reconstruction of CPMV in stain

Icosahedral virus example: 3D reconstruction of CPMV in stain

Acquisition

~2,000 particles/hr
(100 images/hr)

Selection

~3,800 particles/hr

Reconstruction

<1 hr/map
(200 particles)

# grids:	1
# squares:	10
# holes:	-
# defocus pairs:	816
# particles found (full):	24,000
Duration:	17 hrs
EMAN reconstruction	
# particles used in map:	~200
# molecules in map:	12,000
Resolution of map:	~40A

What next?

Improve throughput!

Rate

Data acquisition and targeting algorithms

Cryostage stability

CCD cameras

Yield

Learning and intelligence (databases)

Sustainability

Automated cryostage filling

Robotic specimen handling

Throughput: 2K camera

1700x

Improving throughput: 4K CCD Camera

- Acquisition area at 50,000x for 4K camera
- Acquisition area at 62,000x for 2K camera

Improving yield:

X Selected squares (167)
Holes found (90)
Filaments found (66)
LL identified (33)
Fitted into average (20)

filaments used in final map: ~100
squares used in final map: 20
holes used in final map: 32

Improving sustainability:

Automated cryostage replenishment prototype

Automated cryostage replenishment prototype

Improving sustainability: Robotic specimen handling

Why use a robot to handle specimens?

Screening trials

Virus characterization

...

Throughput: 10's of grids per day

Stain not ice!

Robotic specimen handling

Robotic specimen handling

Robotic specimen handling

Automation goal: Screening trials

Example: Rhodopsin crystals

Courtesy of
Yoshi Fujiyoshi

Automation goal: Virus characterization

Example: CPMV

~1000's particles/hour

200 particles per map

CPMV Classifier

Full	23,277	(63%)
Empty	8,678	(24%)
Junk	4,664	(13%)

CPMV Size Distribution

Core Technology Projects:

Specimen handling
Automated image acquisition
Automated processing
Information handling

Automation goals:

- 7-15 Å resolution
- high throughput
- mainstream
